

UKT – Pioneers of an Innovative Heating and Air Conditioning Technology

The brand UKT (United Klima Technologies) has been pioneering the development of heaters and air-conditioners without an external unit for 18 years.

In 1999 UKT introduced its own “Single Hole Technology” to the market. This novel technology eliminates the impact of visible parts on a building exterior, restoring the architecture of the urban areas currently devastated by old style air conditioning devices that are incompatible with their surroundings. UKT air conditioners do not have a bulky box installed outside, whirring and rusting over time unlike conventional Split or PTAC systems.

As the inventor of this technology UKT guarantee a number of advantages gained from using the system: low installation costs, ease of maintenance, high energy efficiency, high performance, uncompromising design and low noise levels.

UKT's success is formulated by a creative and unorthodox approach to engineering. A combination of components miniaturisation, integral heating with a heat recovery/exchange system that boosts cooling efficiency, the latest state-of-the-art noise reduction technology, high end materials such as stainless steel and aviation grade aluminium come together to create a diversely adaptable range of products. This exciting technology has already been supplied throughout Europe for use in hotel chains, residential, commercial, industrial and offices, luxury yachts, railway locomotives and engineering infrastructure projects such as tunnelling and other construction applications.

UKT has years of unrivalled experience offering a bespoke consultancy, design and manufacturing service for various clients including: developers, architects, civil engineers and military.

With 16 different air conditioners and 100 customisable variants it means UKT offer the most diverse and adaptable product range in the world. If you require a project specific climate control solution there is a high chance you will find what you need at UKT.

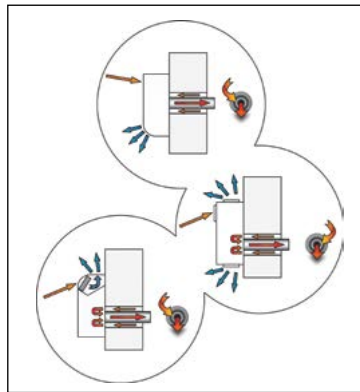

Now based in Kent at their high specification manufacturing facility, UKT is fully independent, harnessing technology to swiftly transform concept in to creation.
